1 [Nevadans are against Yucca Mountain.

It's very important to speak up about this issue so this dump is not just dumped on us. It is not the answer.

What do you plan to do with the waste if they are for more nuclear power plants...as well as coal plants, another environmental mistake. You do not have the answers, only political talk fed is being fed to the people by the Nuclear industry!

How can you be for more power plants when we haven't learned a way to dispose of the waste from the ones we have? It's a very serious topic for all Americans, not just Nevadans. Meanwhile, the transportation would go through the city streets and highways of Las Vegas, a metropolitan city with over 1.5 million residents. let alone 39 other states to get to Yucca Mountain. A Chaotic and dangerous idea as America is not prepared to deal with a nuclear disaster either by an accident or terrorist attack!

2 [Opponents like myself have fought successfully to stop the document approval process once because the collection was incomplete and could not be searched "omits" much critical information!

The state of Nevada has filed a motion to again deny the certification. Yucca Mountain opponenents will voice their arguments against Yucca Mountain again and again and again still Yucca Mountain is Dead!]

continued 1 [One more time "No!" to transporting and burying high level nuclear waste in Nevada.]

3 [All three EISs are profoundly flawed in many ways; the only acceptable course of action is to choose the no action alternatives in all three EISs.]

continued 1 [The best solution to our nuclear waste problem is to stop manufacturing it right now and to containerize it as safely as possible, as close as possible to its generation site.!]]

U.S. Department of Energy, Office of Civilian Radioactive Waste Management

Re: Comments pertaining to the Draft SEIS on a repository at Yucca Mountain and the Draft SEIS and EIS on a Nevada Rail Corridor and Alignment

These comments pertain to two documents that were issued for three environmental impact statements. The titles of the two documents are as follows: (1) Draft Supplemental Environmental Impact Statement for a Geologic Repository for the Disposal of Spent Nuclear Fuel and High-Level Radioactive Waste at Yucca Mountain, Nye County, Nevada (Draft Repository SEIS) and (2) Draft Supplemental Environmental Impact Statement for a Geologic Repository for the Disposal of Spent Nuclear Fuel and High-Level Radioactive Waste at Yucca Mountain, Nye County, Nevada -Nevada Rail Transportation Corridor (Draft Nevada Rail Corridor SEIS) and Draft Environmental Impact Statement for a Rail Alignment for the Construction and Operation of a Railroad in Nevada to a Geologic Repository at Yucca Mountain, Nye County, Nevada

This message was sent by Karen Kostoff, group organizer for Las Vegas Democracy For America:

Dear DFA Member;

I'm sorry for the short notice but please, anyone that can make it today, go to this event and show Nevadans are against Yucca Mountain. It would be good if there was a large turnout. If you simply can't attend please read down to where it posts you can send a letter or email.

It's very important we speak up to this issue so this dump is not just dumped on us. It is not the answer.

So many of our candidates tell us they are against Yucca Mountain...but check if your candidate is still for nuclear power. Two of the top tier are...what do they plan to do with the waste if they are for more nuclear power plants...as well as coal plants, another environmental mistake.

How can they be for more power plants when we haven't learned a way to dispose

of the waste from the ones we have? It's a very serious subject for us all to think on before we cast our votes, too. Meanwhile, it's a very serious subject for our state. Please go or write to speak to this serious issue!

Monday, December 3rd 2007

Opponents like myself have already fought successfully to stop the document approval process once because the collection was incomplete and could not be searched. The Department of Energy has added some documents but still omits critical information and the collection is still very difficult to search. The state of Nevada has filed a motion to again deny the certification. Yucca Mountain opponents and myself will constantly continue to fight to stop the Polioitos and the Bush administration from turning Nevada into a Nuclear Dump ground. We will forever keep fighting and saying "NO!"

I like most Nevadans must constantly repeat ourselves to you the DOE by just saying "No!" "No!" to transporting and burying high level nuclear waste in Nevada.

As I am unable to voice my strong opposition against Yucca Mountain repository and the Department of Energy routes of transportation in person, I am submitting this via e-mail.

All three EISs are profoundly flawed in many ways; the only acceptable course of action is to leave the nuclear waste on their sites., better protected and guarded!

The best solution to our nuclear waste problem is to stop manufacturing it right now and to containerize it as safely as possible, as close as possible to its generation site.!
